Top Skills

Data Modeling
MCP (Multi Agent Protocol)
Large Language Models (LLM)

Certifications

Data Lakehouse in Databricks
Big Data Foundations - Level 2
Microsoft Certified: Azure Data Fundamentals
DWH & Business Intelligence
AWS re/Start Graduate

Publications

IoT-Enabled Assistive Glove for Real-Time Sign Language Translation Using Machine Learning
Multi-Agent Systems in Software Testing

Muhammad Salaar

SoftEng @ NUST '26 | Data Engineer | ETL & Data Pipelines |
Python & SQL
Rawalpindi, Punjab, Pakistan

Summary

I enjoy solving complex system problems, optimizing end-to-end data pipelines, and exploring the evolving landscape of data, AI, and infrastructure. I am passionate about turning raw data into actionable insights and building scalable, efficient systems.

Skills:

- Programming: Python, SQL, Bash
- Big Data Tools: PySpark, Databricks, Fabric
- Focus Areas: Data Engineering, Data Analysis, AI/ML Integration

Experience

Transformatics

1 year 3 months

Teaching Associate

July 2025 - Present (11 months)

Designed and delivered end-to-end data engineering training covering Azure Databricks, Microsoft Fabric, PySpark pipelines, and lakehouse architectures. Acted as the teaching assistant during training sessions, resolving platform and infrastructure issues across Azure services in real time. Architected and deployed secure Azure cloud environments, managing workspaces, RBAC, and compute to ensure reliable training and project operations.

Intern

March 2025 - June 2025 (4 months)

Islāmābād, Pakistan

National University of Sciences and Technology (NUST)

Research Assistant

June 2025 - January 2026 (8 months)

Rawalpindi, Punjab, Pakistan

Fine-tuned large language models using parameter-efficient techniques for multilingual and task-specific use cases (e.g., Urdu transliteration). Built custom datasets for low-resource languages and developed embedding

models for languages such as Urdu and Punjabi. Designed and optimized LLM inference and deployment workflows, including work on multi-agent systems using LangGraph and MCP. Developed a phoneme-based Urdu representation framework to enable robust linguistic comparison and dialect clustering across low-resource languages.

National Cyber Security Auditing and Evaluation Lab (NCSAEL)

Full Stack Developer

March 2025 - June 2025 (4 months)

Rawalpindi, Punjab, Pakistan

Developed a scalable backend infrastructure with FastAPI, Docker, and Redis to support real-time YOLO-driven computer vision inference and alerting. Implemented Celery-based asynchronous pipelines to decouple inference, notification, and storage workflows, improving system robustness under load. Owned full production deployment lifecycle, from containerization and environment setup to performance optimization and reliability hardening.

CSD Pakistan

Data Analyst

July 2024 - July 2024 (1 month)

Rawalpindi, Punjab, Pakistan

Analyzed and processed data using Excel for insights and reporting.

Education

National University of Sciences and Technology (NUST)

Bachelor of Engineering - BE, Computer Software Engineering · (October 2022 - October 2026)
